

GXT 871 Zora Mechanical Keyboard

Software manual

Setting up the software

Follow these steps to download the software and connect your keyboard.

1. Download the software from <http://www.trust.com/25510/downloads>
2. Unpack the .zip and double-click on the installer.
3. Follow the software installation setup and launch the software.
4. Connect your keyboard to your computer with a USB-C to USB-A cable.

Changing RGB lighting

Follow these steps to change the RGB lighting of the keyboard.

1. Click on the menu bar and select "Lightning Setting or Built-in Effects".
Lighting Setting is to customize your own effects. Built-in Effects are pre-programmed effects where you can only adjust the brightness and speed.
2. Select a light mode from the dropdown menu.
3. Depending on the selected light mode, you may change brightness, speed, direction and bandwidth (make LED area bigger).
4. When using the "Select" tool you can turn off individual keys.
5. Select your own colors using the color wheel, RGB code or preset colors.

Recording a macro function

Follow these steps to set up a macro function that can be assigned to a key.

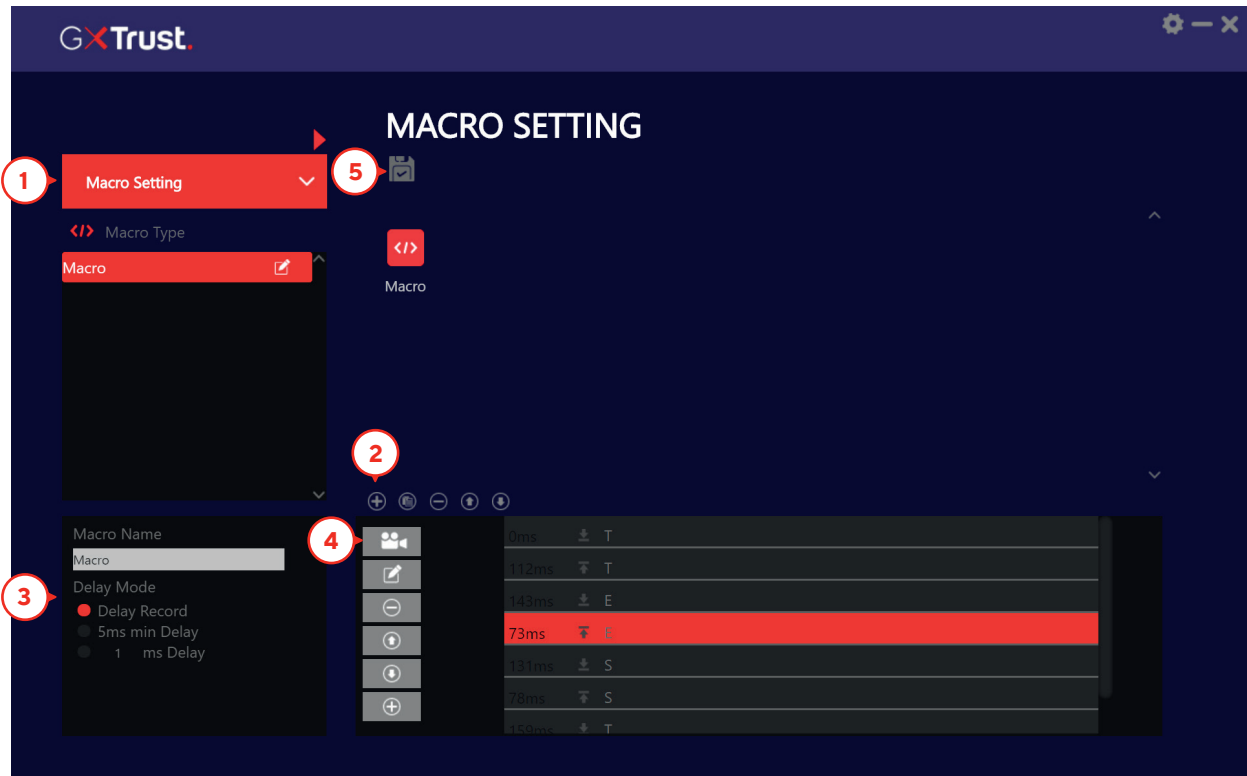

1. Click on the menu bar and select "Macro Setting".
2. Press on the "+" button to add a macro to the list.
3. Enter your desired name and select the amount of delay you want (Delay Record will keep the natural delay).
4. Click "record" and press on the keys you want to have as a macro. After finished you can press record again. The buttons under "Record" are: Edit, Delete, Move Up, Move Down and Create.

Edit: edit the delay milliseconds.

Move Up/ Move Down: move the recorded character up or down.

Create: create another line in between recorded macro's (every created line will be the letter "A").

5. Press the "Save" icon to save your macro.

Key reprogramming

Follow these steps to assign a new function to a single key or create an FN + key combination.

1. Click on the menu bar and select "Keyboard Setting".
2. You can setup different profiles (eg: a profile for work and one for gaming).
3. Select the key that you want to reprogram.
4. You can select different programmable options, including the use of a shortcut with Alt/Shift/Ctrl/Win.
5. You can now select any character and program it on the chosen key.
6. Press the save icon to save your settings to the keyboard.
7. You can remove the programmed key by clicking on the three dots.
